Opioid-Overdose Reduction Continuum of Care Approach

1. Prioritize delivery of services to those who need them most in prison, jail, and other venues.

2. Implement field-based population detection methods.

3. Use data sources to target interventions to those who need services.

4. Engage individuals with lived experience in decision-making processes.

5. Implement active overdose education and naloxone distribution (OEND) programs for people who use opioids and their social networks.

6. Implement active OEND at venues where overdoses are more likely to occur.

7. Include passive OEND strategies.

8. Build OEND capacity among first responders.

9. Enhance OEND capacity among healthcare, criminal legal settings, and through interdiction.

10. Include peer recovery support and peer services.

11. Remove barriers to housing services.

12. Enhance MOUD engagement and retention.

13. Implement on-site MOUD in community-based settings.

14. Expand MOUD capacity in healthcare, criminal legal settings, and through telemedicine.

15. Create linkage programs and protocols.

16. Remove barriers to critical resources.

17. Remove barriers to supplemental behavioral health services.
